

Texas Outpatient & Infusion Center

In association with **CCMC** Health System

Diabetes Care with Physician-Directed Treatment

Discover Physiologic Insulin Resensitization™ (PIR), a new approach directed by physicians to mitigate insulin resistance in diabetes patients.

Physician-Directed PIR protocol offers:

- Evaluation of patients with diabetes and chronic illnesses
- Precision dosing with FDA-approved pumps
- Training and teaching services
- Contribution to peer-reviewed publications

PIR administers insulin as a hormone, instead of a drug, mimicking normal physiology. It aims to decrease insulin resistance, aiding blood sugar's entry into cells for energy.

Visit our research page for peer-reviewed publications and monthly town hall meetings. Find patient video testimonials on our website.

Patients Share Their Positive Health Improvements

Across a Range of Conditions

- Neuropathy diminished
- Energy restored
- Weight controlled
- Medications reduced or eliminated
- Blood sugar controlled
- Mood and sleep improved
- Wounds healed
- Hair and nail growth
- Dementia mitigated
- Macular degeneration
- Chronic illness symptoms improved or diminished
